

Talking Rabbitt

Conversational AI for Supply Chain Intelligence

Stop searching dashboards. Start talking to your data.

Turn Supply Chain Data into Instant Decisions

Presented by Angel Mor

Supply Chain Data is Hard to Use

- Logistics companies generate millions of shipment records daily
- Managers depend on complex dashboards and spreadsheets
- Getting simple answers takes hours of manual analysis
- Slow insights lead to delayed operational decisions

Example question managers
struggle with:

“Which delivery route had the
most delays this week?”

Why Current Tools Fail

Traditional Analytics Tools

- Complex dashboards
- Requires technical knowledge
- Time-consuming report creation
- Static data views

Examples:

- Tableau
- Microsoft Power BI

Managers need answers, not dashboards.

Talking Rabbitt

Talk to your logistics data like a conversation.

Manager asks:

“Which warehouse processed the most shipments this month?”

Talking Rabbitt responds:

- Bangalore Warehouse handled 12,400 shipments
 - 18% higher than last month
 - Displays a chart automatically
-

Key benefit:

Instant answers + visual insights

From Data → Decision

How Talking Rabbitt works

Feature 1

Natural Language Data
Queries

Ask business questions
directly.

Feature 2

Auto Insight Generation

AI explains patterns and
trends.

Feature 3

Smart Visualizations

Charts generated
automatically.

Feature 4

Operational
Recommendations

AI suggests actions based
on insights.

Core Product Features

Example:

“Delivery delays increased in North region. Consider
route optimization.”

Target Customer Profile

Primary Industry

Logistics & Supply Chain companies

Examples

- FedEx
- DHL
- Delhivery

Primary Users

- Logistics Managers
- Warehouse Managers
- Operations Heads

Company Size

Mid-size to large logistics networks.

Built for logistics companies managing large-scale shipment and warehouse data. Designed for operations leaders who need fast insights to optimize deliveries and supply chain performance.

Why Talking Rabbitt Wins

Traditional BI Tools

- Dashboard driven
- Requires training
- Static analytics

Talking Rabbitt

- Conversational interface
- No technical knowledge required
- AI-generated insights
- Faster decision making

From Data Analysis → to Data Conversations

Market Entry Strategy

Pilot with mid-size logistics companies to demonstrate faster operational insights.

Expand through SaaS deployment, integrating with existing logistics systems to deliver AI-driven supply chain intelligence at scale.

Future Vision

Talking Rabbitt will evolve into an AI Operations Copilot

Future capabilities

- Predict delivery delays
- Recommend route optimization
- Forecast shipment demand
- Autonomous logistics insights

In the future, managers will not analyze dashboards.
They will simply ask their data.

THANK YOU
